Los Angeles, CA 90017

Brandon Davis guides public agency clients through all elements of the procurement, construction contract drafting and contract implementation processes for alternative delivery projects in the United States, including large design-build and public-private partnership (P3) projects. His experience ranges from first-of-a-kind highway, bridge and tunnel projects to high-speed trains and people movers. This experience includes complex transportation-related structures, such as major rental-car facilities, toll service centers and administrative office structures.

He offers clients a unique perspective on successfully applying alternative delivery methods for projects because he has helped create state design-build and P3 programs – including passage of enabling legislation – in California, Arizona, Florida, Illinois, Nevada and Utah.

Brandon's expertise includes advising many of the Firm's clients on federal aid compliance issues for major transportation projects.

EXPERIENCE

City of Los Angeles, Los Angeles World Airports – Automated People Mover (APM). Key member of the legal team advising on a \$4.9 billion APM train system to ease access in and out of the Los Angeles International Airport. It will also connect travelers to a light rail, intermodal transportation facility and a rental car center. Now under construction, it is the first APM system procured through an availability payment public-private partnership delivery model and earned several national and international awards. Brandon's services included advising LAWA prior to the procurement on the extent of its innovative project delivery authority and on its process for selecting the ideal project delivery method for this and other related projects in its \$10B Landside Access Modernization Program.

City of Los Angeles, Los Angeles World Airports – Consolidated Rent-A-Car Facility (ConRAC). Key member of the legal team advising on the ConRAC project at the Los Angeles International Airport (LAX). The facility will relocate and centralize car rental facilities away from the Central Terminal Area and provide direct access to major freeways. The \$2 billion project is being procured through an availability payment public-private partnership delivery model. The project captured many honors. Brandon was day-to-day lead on the project through the procurement process, and his services included drafting and negotiating the availability payment P3 contract.

Austin Bergstrom International Airport – Capital Improvement Program. Co-leader of the legal team advising the airport in developing plans and strategies for the procurement, delivery, financing, operation and maintenance of the projects included in the airport's approximately \$4 billion capital improvement plan. This work has included a detailed analysis of the airport's legal authority to utilize various delivery methodologies and funding mechanisms, and other strategic program delivery advice.

California High-Speed Rail Authority. Key member of the legal team advising on key elements of the high-speed train system connecting the state's major urban centers. Among many assignments, we advise on the procurement of track and systems using a performance-based design-build-maintain method and administration of the design-build civil contracts. We also helped draft procurement and contract documents and oversaw the award of a nearly \$1 billion design-build contract for the first section. We also assisted organizational conflicts of interest and federal and state environmental permitting. Brandon's services include advising on the procurement of trainsets, procurement planning and use of alternative contracting methods.

Port of Long Beach – International Gateway Bridge. Key member of the legal team that advised on the development of a new 1.5-mile bridge to serve one of the world's largest and busiest container ports. We assisted with the \$649.5 million procurement including advising on project labor agreements, and are currently assisting with claims resolution and contract closeout. We also negotiated agreements for property acquisitions and utility relocations, as well as agreements for transfer of property to another public agency and the project's long-term operation and maintenance agreement. Brandon advised on procurement and contract documents and negotiations and is now helping to implement the agreement during construction.

Puerto Rico Highways and Transportation Authority – Electronic Toll Collection System/Customer Service Center. Leader of the Nossaman team that advised the Authority on its procurement of a new toll services provider for the various toll roads and toll bridges owned by the Authority. The resulting contract will address development, installation, integration, testing and maintenance of the back office toll processing system and all customer interface and payment services. Representation included coordination / negotiation with the concessionaire that is responsible for operating the Authority's two most traveled toll roads. Nossaman's contract terminated on Dec. 31, 2019, just ahead of the Authority's receipt of proposals.

Illinois Department of Transportation – Alternative Project Delivery Programs. Key member of the legal team helping the Department develop an alternative project delivery program, with a focus on the use of the design-build, construction manager/general contractor and P3 delivery methods. Brandon's services have included helping draft enabling legislation, meeting with industry representatives to address concerns regarding innovative project delivery, development of training manuals and assisting the agency in selecting potential projects for innovative delivery, including meeting with potential proposer teams regarding proposed projects.

Florida Department of Transportation – I-595 Corridor Improvements. Key member of the legal team that advised on procurement and delivery of this \$1.8 billion public-private partnership aimed at alleviating congestion on the main east-west traffic corridor in Fort Lauderdale. We advised on procurement and contract documents and the financing structure, and addressed issues that arose throughout design and construction. The project, the first U.S. transportation project with an availability payment scheme, won numerous honors. Brandon played an integral role in the procurement and contract drafting processes for this groundbreaking project and advised the Department on contract implementation issues during the design and construction phases.

Florida Department of Transportation – Port of Miami Tunnel. Key member of the legal team that advised on procurement, financing and delivery of the public-private partnership that greatly reduced traffic in the Miami region. The \$800 million availability payment project, which opened in August 2014, included construction of twin 42-foot tunnels under Biscayne Bay, linking Port facilities on Dodge Island, MacArthur Causeway and I-395. The project captured many honors. Brandon assisted with risk allocation and drafting procurement and contract documents and advised the Department on contract administration issues during the design and construction phases.

Arizona Department of Transportation – Flagstaff Facilities. Co-leader of the legal team that advised on an innovative project to replace the transportation agency's Flagstaff DMV and maintenance facilities. In the Department's first public-private partnership project, ADOT solicited proposals to relocate and consolidate its offices to reduce agency costs in exchange for its existing property available for commercial development. The agency entered into a pre-development agreement with a developer in 2013 and implementation agreement in 2020, completing the transaction.

Bernalillo County, New Mexico – Public Safety Training Academy Project. Leader of the legal team that advised on the procurement of a developer to design, develop, construct and maintain a new Public Safety Training Academy. Combined, the academy is estimated to be 37,500 square feet, with an additional 3,200 square foot apparatus bay and a five-story fire-training tower. The majority of project costs for the roughly \$50 million project are to be repaid by the County through rent payments over the course of a 30-year lease of the new facility.

California Department of Transportation (Caltrans) – Public-Private Partnerships Program. Member of the legal team that represented Caltrans on its statewide innovative contracting program, including its procurement of the Presidio Parkway Project. Brandon assisted the agency with policy issues, development of procedures and methodologies for implementation of the contracting program and analysis of legislative matters.
